William Prince & Son

Catalogue of Bulbous and Tuberos  
Rooted Flowers, . . .

1838 &amp; 1839.

# CATALOGUE OF BULBOUS AND TUBEROUS ROOTED FLOWERS,

OF THE MOST CHOICE AND SPLENDID VARIETIES,

CULTIVATED AT THE

LINNEAN BOTANIC GARDEN AND NURSERIES, FLUSHING,  
NEAR NEW-YORK.**William Prince & Son, Proprietors.**

In addition to the immense stock under cultivation in the establishment, comprising more than 50,000 roots, the proprietors make very large annual importations of the choicest new varieties from Holland, Belgium, and other parts of Europe. The following have been selected with great care from the finest foreign collections, and are remarkable for their size, beauty and peculiarity, and for the delicacy of their tints. In the selection no expense has been spared, and great exertions and large disbursements have been made, in order to obtain the most beautiful varieties of every class. It can therefore with the utmost confidence be asserted, that this collection is unrivalled in extent and variety. The whole are cultivated under the same names by which they were imported, and the prices are greatly reduced, and are lower than have ever before been offered to the public, the great increase of our stock enabling us to tender this advantage to purchasers. Those who purchase to re-vend, will be dealt with on the most reasonable terms; and where no wholesale prices are named, a deduction of 25 per cent. will be made from the retail prices.

At the conclusion of the present Catalogue the necessary directions are given for their culture, &c.

Where the prices are by assortment, or by the dozen, the selection of the varieties is to be made by the proprietors; but if applicants will name such as they already possess, those varieties will be omitted in the selection.

\* denotes the earliest varieties, most proper for blooming in glasses or pots.

† denotes those that are tender.

## DOUBLE HYACINTHS.

### Dark Blue and Purple.

245 *Chrysolora	50		

NOTE.—Above 100 other varieties of double Hyacinths can be supplied, if more kinds are desired.

### SINGLE HYACINTHS.

In regard to Single Hyacinths an incorrect prejudice exists, arising from the fact that their peculiar merits are but little known. For *early flowering*, and particularly for *glasses or pots*, they are extremely desirable; they combine the most brilliant colours, and surpass the double varieties in the profusion of their bells. It may in fact be said that they precede the double varieties, and thus in a general collection extend the period during which we may enjoy the beauties and fragrance of this delightful class of flowers.

PÆONIES. *Pivoines.*

No class of flowers has recently attracted more attention in Europe than this, a monograph of which has been published in London. Every variety will support the winters of the United States and Canada. Most of the varieties are extremely splendid, and others possess striking peculiarities. Anticipating that a similar taste would be evinced in this country, the Proprietors have, by great exertion, obtained every variety possible.

1	Sabine's single crimson official	<i>Pæonia officinalis, sabini</i>	\$ 75
2	Large double crimson	<i>rubra</i>	25 cts to 37

## DOUBLE DAHLIA, OR GEORGINA.

This magnificent plant bids fair to rival in splendour and in diversity the far famed Tulip and the Rose. Many of the varieties are inconceivably beautiful and interesting, and there seems a never ending variation of colour and form.

The numerous varieties combine the richest shades and most varied hues of which nature is susceptible, with every diversity in shape and magnitude, from the size of a small globe an inch and a half in diameter, to an expanded disk twenty-four inches in circumference! Most persons are not aware how simple are the means necessary to their preservation during winter. When the frost has destroyed the foliage, nothing more is required than to cut off the stalks two or three inches from the ground, and to take up the roots and put them in boxes of dry sand in a cellar or any other place free from frost, there to remain until spring without further care. Indeed, the Proprietors have for the two past winters kept their stock quite dry and without sand.

The collection here offered is unrivalled in extent and beauty, and combines the most magnificent varieties of each class; it being a concentration of the most choice and interesting that could be selected from the principal establishments of Europe. The inferior kinds, to the extent of 200 varieties, although in our possession, we have omitted, and it will be perceived that the catalogue is particularly rich in the splendid Variegated, Striped, Mottled, and Shaded varieties, and others of the first class, and most vivid and brilliant colours.

In addition to the usual course of obtaining the newest kinds offered for sale in the catalogues of foreign Florists, the Proprietors have made arrangements with several amateurs abroad to furnish them with their most interesting varieties previous to their "*coming out*" in Europe; and it is to this arrangement that they are indebted for a large number of the very splendid varieties comprised in their catalogues of the last and the present year, although obtainable nowhere else in our country. The present collection may with justice, therefore, be said to constitute the *acme* to which this favourite flower has yet attained. Other new varieties are continually accumulating, and Supplementary Catalogues, containing the additional kinds, will be published in March and October of each year.

A specimen bed, comprising a thousand plants, is annually planted for the inspection of amateurs, which will be extended by additions of all the most choice new varieties that foreign countries and our own may present, thereby affording ample facilities for personal examination and selection, to those who desire it.

A large stock will be constantly under culture in pots, so as to be ready for transportation at any period desired, and more than 10,000 are now ready for delivery.

It may be asserted without fear of contradiction, that at no period since the era of the famed Tulipo-mania, has the attention of the votaries of Flora been so universally devoted to any flower as it now is to the Dahlia, the "*Glory of the Autumn*." To the varieties first cultivated, the objection was justly made that the expansion of their flowers commenced too late in the season to merit much estimation, but culture and judicious propagation have removed this difficulty as regards the new varieties. These commence blooming the middle of June, and continue until arrested by frost, our fine American autumn being particularly favourable to their developement. The new varieties produce also a much greater profusion of flowers than the older sorts.

Rivalling as they do all other plants of the garden in their majestic appearance and gorgeous display, they also combine the merit of facility of culture to such a degree, that the most ignorant can scarcely fail of

success; and indeed the day is not distant, when the number of varieties will surpass that of either the Hyacinth, the Tulip, the Rose, or the Carnation, and the numerous Striped, Variegated, and Mottled Dahlias, will then be designated under the various classes of Flakes, Bizarres, &c., in the same manner as the Carnation; the connoisseurs, without doubt, becoming quite as fastidious in regard to the formation of the petals, as they now are in respect to the last named flower.

We have attached to each variety the height to which it usually attains, and although the height will vary somewhat according to the soil and culture, yet by attention to this point, the various kinds may be always so arranged in the garden, that the dwarfs will not be hidden by the taller varieties; and when several rows are planted in a range with each other, with a due regard to their height, they will present, as it were, *a terrace of flowers*.

Purchasers will be furnished with a printed treatise on the requisite culture, containing the best rules, as practised by intelligent cultivators in Europe and elsewhere.

A discount will be made to those who purchase largely, and to Nurseries and other venders. To those who order a dozen plants or more, an abatement of 25 per cent. will be made from the stated prices, which it will be perceived are much lower than usually charged, the great and increasing stock enabling us to offer them on these favourable terms, and also to select superior roots. The rates for assortments of Dahlias will be found at the end of the Catalogue.

It seems scarcely necessary here to add, that the deceptive practice of ingrafting the double varieties on roots of the single kinds, is never practised by us.

Where the selection is left to us, such an assortment will be selected as will form a pleasing combination of colour, form, height, &c. When packed dry, which can be done from October to May, they occupy so little space, that a great number may be comprised in a small compass, and they can be thus safely transported to any distance. During the residue of the year they can be transported in pots, or by enveloping the roots in moss, and packing them properly in accordance with the distance, &c.

*Wintering Dahlias.*—Our practice is exceedingly simple. As soon as the frost has killed the tops, we cut them off, and take up the roots, and dry them for 2 or 3 days in the sun, after which we place them on the shelves in a cellar, perfectly dry and free from frost, where they remain till the period for spring planting. Moisture is destructive to them, and in a damp cellar or room they are very liable to rot; but in a dry one not a single root will be injured, if it is kept free from frost.

The following method to preserve Dahlias through the winter, is sometimes adopted in Denmark. When the foliage and flowers of the plant have been destroyed in October, the stalks are cut down about a foot from the ground, and the earth drawn up around with a hoe. They stand thus until the beginning of November, (unless the cold should be so severe as to endanger the roots,) that the tubers may become as ripe as possible; they are then dug up and placed in a trench in the garden, with earth between them, and a layer of earth over them. A covering of sea-weed, horse manure or leaves, is then thrown over, sufficient to exclude the frost. Here they remain until the time of planting in spring. Dahlias thus wintered grow much stronger than those kept in the common manner. It is necessary that a dry spot be selected for their habitation.

These Dahlias comprise all the finest and newest varieties exhibited the last Autumn in this country and in Europe; many of which cost from 2 to 5 guineas each. They should be taken immediately from the pots they are now in and planted in the open ground. The ground should be well dug, and if manure be used, it should be well rotted. It is, however, unnecessary. Take up the roots in November, and keep them in a dry place in the cellar during the winter.

## DAHLIAS IN ASSORTMENTS, &c.

Those who order assortments of Dahlias, should name the kinds they already possess; in which case those varieties will be omitted. The selection of the assortments is to be made by the Proprietors. The prices are rated lower on account of their retaining the privilege of sending such as they have the largest stock of: but in doing this, the purchaser receives quite as beautiful varieties as he could select himself, even at considerable higher rates. It is the determination of the Proprietors, that their customers shall be supplied, in all cases, on the most favourable terms.

Superb double varieties, each 75 cents.

Double varieties, of kinds less rare, each 25 to 50 cents.

Some very superior new kinds, each \$1 and upwards, as per Catalogue.

Some very superior new kinds, \$8 to \$10 per dozen, including many that are usually sold at very high rates.

Very fine assorted kinds, per dozen, each a distinct named variety, \$6.

Fine do. do. do. but less rare, \$4 50.

Assortments, do. do. of the more common kind, \$3.

Mixed double varieties, \$2 50 per dozen.

Double Dahlias by the 100, 200, or 300, or more varieties, will be supplied at very low rates.

### *Directions for the Culture of Bulbous and Tuberous Roots.*

*Situation.*—A southern aspect, dry and airy, and sheltered from the north winds, is preferable for most bulbs; but Anemones and Ranunculus will do better in a situation commanding a southern aspect, and which can be protected from the heat of noonday.

*Soil.*—The following compost is most suitable for the Hyacinth, Tulip, Crown, Imperial, Narcissus, Crocus, Snow Flake, Iris, Lily, Colchicum, Anemone Ranunculus, Snow Drop, and most other bulbs:—One third sand, one third well-rooted cow-dung, and one third good garden mould. Let the beds thus formed be well dug over to the depth of fifteen or eighteen inches, that the materials be well mixed together; a fourth part of

rotten wood, or vegetable mould from a swamp, may be added to the above, if conveniently to be obtained, which will, at all times, be beneficial in giving additional lightness to the soil.

The various species of the *Amaryllis* succeed best in a rich sandy loam; and the families of the *Ixia*. *Oxalis*, *Feraria*, *Gladiolus*, *Antholyza*, *Lachenalia*, and most other Cape and Tropical bulbs, require the soil to be more sandy than for the generality of other bulbs.

*Forming the Beds.*—The beds should be raised about four inches above the level of the walks, and moderately arched, which will afford an opportunity for the superfluous moisture to run off. Sand (either sea or fresh) strewed in the trenches, before and after placing the roots, will be beneficial.

*Time of Planting.*—For the *Hyacinth*, *Tulip*, *Crown Imperial*, *Squill*, *Lily*, *Polyanthus Narcissus*, *Double Narcissus*, *Jonquil*, *Iris*, *Crocus*, *Colchicum*, *Star of Bethlehem*, *Snow Drop*, *Snow Flake*, *Gladiolus*, *Allium*, and most other hardy bulbs, the preferable season for planting is the months of October and November—and it is well to be observed, that the species of bulbs above named, (*Tulips* excepted,) will thrive best if not taken from the ground oftener than every second or third year. The different species of the *Feraria*, *Antholyza*, *Ixia*, *Crinum*, *Hæmanthus*, *Eucomis*, the tender species of *Amaryllis*, *Pancratium*, and *Gladiolus*, and most other delicate bulbs, may be planted during the months of November and December, in pots, when intended to be sheltered during the winter, or they can be kept in dry sand until April or May, and then be planted in pots, or in the open ground, when it has become free from frost, and perfectly settled.

*Depth and Distance.*—*Hyacinths*, *Persian Fritillary*, *Martagon*, and other *Lilies*, and *Præonies*, should be planted at the depth of four inches; *Crown Imperials* and *Polyanthus Narcissus*, five inches; *Tulips*, *Double* and *Single Narcissus*, *Jonquils*, *Colchicums*, *Snow Flakes*, *Bulbous Iris*, and *Gladiolus*, three inches; *Crocus*, *Arums*, *Small Fritillaries*, and *Snow Drops*, two inches; *Ranunculus* and *Anemone*, one and a half inches; *Dogstooth Violet*, one inch; always measuring from the top of the bulb. The rows should be ten inches apart, and the roots be placed from four to six inches apart in rows, according to their size.

*Protection during Winter.*—In the Middle and Northern States it will, on the approach of winter, be beneficial, though not absolutely necessary, to cover the beds with straw, tanners' bark, withered leaves, or light earth from the woods, (such as is formed by the decay of foliage,) to the depth of two or three inches, as it prevents any ill effects which a very severe season might have upon the roots. This covering must be carefully raked off early in the spring. The *Polyanthus Narcissus*, *Hoop Petticoat Narcissus*, and *Arum Dracunculæ*, being more tender than other species, require a covering of five or six inches of straw or leaves in the manner above detailed.

*Taking up Bulbs after Flowering.*—About a month after the bloom is passed, the foliage puts on a yellow decayed appearance. This is the proper season for taking up the roots; on doing which, the stem and foliage should be cut off within an inch of the bulb, leaving the fibrous roots attached to it. After this preparation, spread them singly in an airy room to dry, for two or three weeks, then wrap each root carefully in paper, (the air being injurious,) or put them in dry sand, until replanted.

*Anemone and Ranunculus.*—The soil should be compact and rich, not light or sandy. A stiff loamy soil suits them very well; and with it there should be mixed one fourth part of rotten manure, and, in doing this, the earth ought to be well pulverized. In England they are planted about the 10th of February; and here they may with success be planted as early in the spring as the ground can be worked. We have had them to succeed well when planted at the end of October, or early in November, and pro-

ected during the winter with a covering of straw or leaves, which was removed early in the spring. They will bear a considerable degree of cold, but our intense frosts destroy them when not protected as above. They require a moist soil, but not over much so. Heavy rains injure and rot them; and the ground selected should be such as does not retain water and become sodden. In dry weather, they will require frequent waterings. When the roots are taken up after blooming, they should be preserved in dry sand till replanted.

*Culture of Tender Bulbs in pots, comprising the Oxalis, Lochenalia, Ixia, Gladiolus, Antholyza, &c. &c.*—The management of these is extremely simple. They should have as much light, sun, and air, as possible, and be kept free from frost. When the foliage is past, and the roots consequently in a dormant state, they can be either left in the pots, in a dry situation, without watering, or be taken out and wrapped in paper, or packed in sand till the ensuing season, at which period they will be re-potted in fresh soil composed as already detailed.

*Culture of the Amaryllis and Tuberose.*—The *Amaryllis longifolia*, (both rose coloured and white,) is extremely magnificent, and will support our winters by planting the roots at the depth of 6 inches from the extremity of the neck of the bulb. A southern exposure is much to be preferred, the warmer the better. They will also flourish admirably if planted in a pond below the point of congelation. The *Amaryllis Formosissima*, *vitata*, *aurea*, *belladonna*, *equestris*, double and single; *reginæ*, *psittacina*, *Johnsoni*, *gigantea*, *ignescens*, and all the other spring, summer, and autumn flowering species may, if preferred, be preserved during winter in boxes of dry sand, and planted out in the open garden at the end of April, or beginning of May, in a rich sandy loam, where they will bloom with the utmost splendour. The different species of *Zephyranthes*, *Crinum*, and *Pancratium*, will succeed admirably by the same course of culture. In planting the above named roots, place the bulb so that one third of its diameter will be above the surface of the ground. This is to apply to all, except the *Amaryllis Formosissima* or Jacobean Lily, which should have the bulb covered, leaving the neck only to project above the surface of the ground. Tuberoses, and the *Feraria tygria*, or Tiger flower, should be planted at the depth of one inch, the numerous offsets on the former being first broken off to prevent their impoverishing the main root and arresting the bloom. The double and striped leaved Tuberoses are greatly admired; the latter of these, and the Common Single flowering, are more certain in their bloom than the double variety. The *Feraria tygria* is exceedingly beautiful, and therefore much admired.

*Hyacinths and other Bulbs in pots or glasses for winter blooming.*—For this purpose Single Hyacinths, and those designated as earliest among the double, are to be preferred. The *Polyanthus Narcissus*, Italian, or Roman *Narcissus*, Double *Narcissus*, Double and Single Jonquils, Persian *Iris*, *Crocus*, the winter and spring flowering varieties of the *Cyclamen*, and the Double and Single Duke van Thol Tulips, make also a fine appearance during the winter season. Bulbs intended for blooming in pots during the winter, should be planted during the months of October and November, and left exposed to the open air until the ground begins to freeze, when they should be removed to the Greenhouse or to a warm room. They will need occasionally moderate waterings before they begin to vegetate, and when they attain to a growing state should receive a plentiful supply by pouring it into the saucers. They should at all times be exposed as much as possible to the sun, air, and light, to prevent their foliage from growing too long, or becoming of a yellow hue. Bulbs cultivated after this manner will mostly bloom in January, and next to the Hyacinth, the *Polyanthus Narcissus*, and Double Italian, or Roman *Narcissus*, may be ranked among the most desirable for beauty, fragrance, and easy culture.

Those intended for glasses should be placed in them about the middle of November, the glasses being previously filled with pure water, so that the bottom of the bulb may just touch the water; then place them for the first ten days in a dark room, to promote the shooting of the roots, after which expose them to the sun and light as much as possible. They will bloom, however, with little or no sun, but the flowers will be inferior in colour. The water should be changed as often as it becomes impure, at which period the roots ought to be drawn entirely out of the glasses and rinsed in clean water, the glasses being at the same time well washed inside. Rain or soft water is preferable to that termed hard, but either will answer the purpose, provided it be perfectly clear. Bulbs that have been forced are of but little value, and require a considerable period to regain their natural vigour. When removed from the pots or glasses, they should be immersed in water for a week, and then planted in a soil properly prepared, where they will usually commence flowering again the second year.

*Dahlia, or Georgina.*—Few of our most rustic plants exact less care than this splendid native of Mexico. Indeed, so simple is its culture, that it is already widely disseminated in every part of Europe, as well as in the West Indies, South America, &c., in all of which it has been found to succeed. It will thrive in any good soil, but as is the case with other plants held in great estimation, amateurs bestow more care to its culture than is absolutely required, and have adopted particular rules for that object. The roots are tuberous, and towards the last of April they begin to push out young shoots at the base of the stem of the previous year. At this period, or rather earlier, they should be planted; they will, however, succeed perfectly well if this is deferred till June, but will not come so soon into flowering. In England they usually from choice, plant the Dahlia in poor, gravelly soil, in order to render it more dwarf in stature, and this course may have its advantages in a humid atmosphere. In our own country, however, where the heat of summer is excessive, and where we are sometimes visited by a severe drought, the Dahlia would often be absolutely blighted, unless the soil were sufficiently rich and retentive of moisture. When planted in a generous soil, our climate is so extremely congenial to its habits, that it expands with the utmost luxuriance, attaining a degree of beauty in its development, if not unequalled, at least not to be surpassed.

The course we have adopted for its culture, although extremely simple, has been eminently successful, and the directions we shall now give are in accordance therewith. Make the ground mellow to the depth of eighteen inches, digging in at the same time a liberal supply of manure. Plant the dwarf kinds at three, and the tall ones at four feet distant; and before placing the roots, dig in a shovel full of manure at the top of each hole destined to receive them. The root should be placed two inches beneath the surface—measuring from the base of the old stem. Most persons allow but one stalk to grow, and of course select the strongest—cutting away the weaker ones. When planted along a walk or avenue, a triple range presents a very beautiful appearance, the most dwarf being selected for the first row, those of greater stature for the second, and the tallest for the third row—indeed this manner of arrangement may be extended to five or six rows. Another mode is to plant them in clumps, either circular, square, or as the taste may suggest, the tallest varieties being selected for the centre. In either of these arrangements, a judicious selection of the various colours is requisite, in order to unite to their brilliant display, the advantage of a tasteful combination.

When the plants are about a foot high, a pole should be placed by each, proportioned to the usual height it attains, which should be driven into the ground about a foot from the stalk, so as not to interfere with the roots. The poles or stakes will necessarily vary from three to eight feet in height above the surface; and to be firmly placed, should penetrate

the ground from twelve to eighteen inches. Those for the taller plants will require of course to be of greater thickness and strength than such as are designed for the more dwarf varieties. The work of driving the poles may be more easily effected immediately after a rain, when the ground is moist.

As the plants advance in growth, it will become necessary to tie the stalks firmly to the poles to guard against the effects of winds and storms. For this purpose, common bass matting, or any other soft ligature is to be preferred. The branches being extremely brittle, are subject to be broken in severe gales when not well supported. Some persons train their Dahlias on a trellis, which affords security to every branch, and presents at the same time a fine effect. It is only in very exposed situations that the extreme caution is required of tying every branch; and in cities and other well sheltered locations, far less care will suffice in this respect. It is deemed beneficial to trim off the lateral shoots nearest the ground, to a certain height in proportion to the growth of the plant; say for dwarfs twelve inches, and for other varieties eighteen, increasing to twenty-four inches for the tallest. Some cultivators thin out about half the number of upper branches, in order to add to the strength of the remaining ones, and to increase the size and beauty of the flowers.

---

TO VENDERS of *Esculent Vegetable, Field and Flower Seeds, Bulbous Flower Roots, Dahlias, Paeonies, Fruit and Ornamental Trees, &c.*

**WM. PRINCE & SONS**, having the most extensive Horticultural Establishment in America, announce to all venders of Seeds, and to those who may desire to undertake such business, that they will supply every variety desirable, at very low rates and at a liberal credit, it being their intention to render this branch of business profitable by its great extent, and not by enhanced prices.

A large extent of ground is devoted to raising their Seeds, and their arrangements in foreign countries are such as to ensure accuracy. These seeds possessing therefore the advantage of being raised under our own observation, or when imported from confidential correspondents, of being tested to our satisfaction, their *accuracy and vitality are expressly guaranteed*. The imported seeds are mostly obtained from the south of Europe, where they become so well matured, that they preserve their vitality far better than English seeds, the latter being raised in a humid climate. The Catalogue will be found to contain many new and very choice varieties *never before offered to the public*, and incomparably superior to many of the old varieties; and it is intended to enrich this branch of the business with the same zeal which has been extended to the other departments. Among the new acquisitions are a number of very superior Cabbages, Lettuces, Peas, Beans, Onions, Radishes, Beets, Cucumbers, Squashes, Pumpkins, Spinach, Turnips, &c. introduced from the south of France, Spain and Italy, and particularly suited to our climate. The following choice new Melons can now be supplied—Malta winter, with green flesh, rich and high flavored, and keeps till February; Netted Romana, Oval Romana, French Muscade, Cohansa, Imperial, Ispahan, Cyprian, Early Cantaloup, Green fleshed Sugar, Fine Japan Cantaloup, Dark Orange Cantaloup, Embroidered Cantaloup, Scarlet Rock, Small Prescot, White Rock, Green Pine Apple, Netted Cantaloup, and several others, comprising a luxurious addition to the dessert. Among the choice new Beans, that great desideratum has been obtained; a substitute for the Lima, suited to more northern climates. The *prolific Lima* exceeds the common Lima in richness, is at least two weeks earlier, and its produce is fourfold. The new Bonavista bears a similar rank for excellence among the dwarf varieties. Space will not here allow us to state in detail the superior qualities of the other new va-

rieties, but those who request a selection of the choicest will be sure to receive such.

A Supplementary Catalogue is annexed, enumerating about 600 varieties of Annual, Biennial and Perennial Flower Seeds, very many of which are of extreme rarity; and they being mostly collected from plants in this establishment, their excellence may be relied on. The principal object in view is to furnish venders of seeds with wholesale quantities at reasonable rates, but to accommodate our correspondents we cannot object to furnishing smaller parcels for family gardens when applied for. Specimen beds are sown of every variety, for the inspection of visitors, and accurate descriptions are made for the purpose of perfecting a cheap work which it is proposed to publish, containing descriptions of the different varieties of Esculent Vegetables, &c., with directions for their culture, &c.

Every person desirous to engage in the sale of the above named articles, will, on application, *receive all the information requisite to the object*, and such an establishment ought to exist in every town in the Union. The present period is particularly eligible for forming arrangements for business, preparatory to the regular sales. Bulbous roots, Dahlias, Pæonies, &c. being usually vended in a dry state, can with perfect convenience be made objects of sale in Seed Stores, and they will be supplied at so literal a discount as to make their sale an object of importance. The period for sales is from the 1st of October to 1st May, but Dahlias will succeed if not planted till the middle of May or 1st of June. Double Dahlias, of named varieties, selected by the Proprietors, will be supplied at \$3, \$4.50, and \$6 per dozen, according to quality and rarity, and these can be retailed at a large profit. Each Dahlia will be put up separately in moss, ready for sale, when sent to venders. The following species of Bulbs can be vended in the Spring as well as Autumn, as they need not be planted till May; Amaryllis Formossissima, or Jacobean Lily, and most others of its class, Tuberose, Feraria, or Tyger Flowers of all kinds, Crinum, Pancratium, Zephyranthes of all kinds, and some others. The reduced prices for Bulbous Flower roots by the dozen, and in assortments, as stated in the present Catalogue, will allow a retail profit thereon of from 25 to 100 per cent.

Great attention has been paid to obtaining from foreign countries the finest Agricultural seeds, among which are the following—Pacey's and Scotch Perennial Rye Grass; Italian Rye Grass; Venetian Wheat, which has produced here 34 bushels to the acre, and other varieties; Skinless Oats; English Potatoe Oats, weighing 44 lbs. per bushel; Early Angus, and Hopetoun Oats, superior to any others in Europe; English, French and Dutch White Clover seed; Provence Luzerne, the finest known; Trifolium, incarnatum, or Crimson Clover, very early; Double crop Sainfoin; Large Lentiles; Vetches of the best varieties; Trefoil, or Yellow Clover; Taylor's Fortyfold, and Early Nonpareil Potatoes, now taking precedence of all others, the former being the most productive variety known; Potato and White Top Onions; White Italian Mulberry; Large Riga Flax; Superior Barley of two varieties; extra large Fuller's Teazel; Mangold Wurzel Beet, of the best variety; Large yellow, and Large White Sugar Beet, the latter sweetest of all Beets, and the three all very profitable for cattle; Superior Purple Top Swedish Turnip, or Ruta Baga; Large White and Large Yellow field Carrots; the best kinds of Field Turnips and Cabbages, for cattle, &c. The seeds of these can be furnished in large quantities, much below the usual rates, a difference in price of course being made when very large parcels are desired; and where the purchase is made for *cash*, a discount will be allowed. Those who desire it can forward lists stating quantities wanted, &c., which will be priced by us, and returned by the first mail.

Some explanation may be requisite in regard to the course adopted in making sales to venders. The seeds are usually supplied by the pound or bushel; but of the higher priced Vegetable seeds, and of such as are in but

little request, parcels of half and quarter pound, and of a half, quarter and eighth bushel, will be supplied on similar terms. Applications are sometimes made for wholesale quantities to be put up in retail parcels, regularly labelled, &c., and they will be supplied in that manner when required. Purchasers will readily perceive, however, that they derive much greater advantages on the score of profit, by purchasing in the manner first designated. Flower Seeds, of above 600 beautiful varieties, will be supplied to venders in parcels, at 25 to 50 cents each, and many varieties can be furnished by the ounce, pound, &c., when so required. They will also be supplied, put up in small parcels ready for retailing. A liberal credit will be allowed, and where a good understanding is established, there will be no difficulty in arranging this point to mutual convenience, and on this, and every other subject the suggestions of correspondents will receive the fullest consideration. The different Treatises hereafter enumerated will be supplied to venders at 20 per cent. discount. A Seed Catalogue, containing the New-York retail prices, as a guide to venders, will be sent to every applicant. Seeds of the new crop can be supplied in August and September, and Turnip seeds and some other kinds can be furnished the last of June. When so desired, assorted boxes of Seeds can be supplied, selected to suit any part of North or South America, the West Indies, or elsewhere, and of any value from \$5 to \$100. Implements of Husbandry and Garden Tools of every description, Agricultural and Horticultural Books, and the superior Compressed Dry Herbs, prepared by the Shakers, can be supplied to any extent at their prices.

The Proprietors have further to state, that their Fruit and Ornamental Trees, &c., are of *large size and vigorous growth*, and superior to any before offered to the public. The Establishment contains at the present period *more than a million of Trees and Plants*, and the Proprietors are willing to enter into arrangements of the most liberal description both as to prices and credit, with all such persons as desire large quantities of Trees, &c.; and with those proprietors of Nurseries who wish to extend their collections, and such other persons as wish to establish *New Nurseries*, they will enter into arrangements *on terms which will allow ample time for advantageous reimbursement*. Any persons who are desirous to act as agents for receiving orders for Trees, in towns where no agency at present exists, will please to communicate their views in regard thereto. If any correspondents have raised seed of very superior Vegetables, &c.; they will please to communicate the fact. Any packages intended for us must be left with *A. D. Maintain*, corner of South and Beekman streets, New-York, but letters should always be transmitted per mail.

REMARKS.—All orders for Fruit and Ornamental Trees, Greenhouse Plants, Bulbous Flowers, Dahlias, or Seeds, must be sent *direct to us, or through a regularly authorized agent, and not through the agency of any person who rents similar articles*. Every invoice transmitted by us will have a *printed heading, and our signature, to prove it genuine, and we assume no guarantee whatever, where such an invoice cannot be produced*. We mention these cautions for good and conclusive reasons, and we most particularly enjoin their strict observance on purchasers. When orders are sent, directions should be very precisely given how the packages are to be marked, and by what route or conveyance they are to be forwarded, &c. Orders from a distance will always receive the utmost attention, both as to packing and forwarding; and it is only requisite for persons sending orders, to specify the extent of land and water carriage, and the articles will be packed accordingly. The packages will be forwarded by such route as shall be designated, and where the option is left to us we will adopt such mode of transmission as shall be most economical and safe. During winter, when the northern rivers and canals are frozen, all packages destined for the Western States can be sent by the way of New-Orleans, or via Philadelphia or Baltimore, to Pittsburgh or Wheeling.

All Proprietors of Nurseries and venders of seeds, &c., are invited to visit and inspect our Establishment.

NEW CATALOGUES, *with reduced prices*, which are distributed *gratis*, on application, *post paid*.

- No. 1. Fruit and Hardy Ornamental Trees, Shrubs, and Plants—pp. 88.
2. Bulbous and Tuberous rooted Plants, Double Dahlias, &c., pp. 36.
3. Greenhouse Trees, Shrubs, and Plants—pp. 44.
4. American Indigenous Trees, Shrubs, and Plants—pp. 50.
5. A Catalogue of Garden, and Flower Seeds.
6. Do. do. do. in French.

The Books and Catalogues can be transmitted by mail, at a postage of  $1\frac{1}{2}$  to  $2\frac{1}{2}$  cents per sheet.

N. B. The Proprietors will supply the following classes of Plants in large or small Assortments, at very reduced rates.

Camellia Japonica, or Japan Rose, of 150 varieties.

China Roses, and other classes of Roses, comprising above 600 varieties, and including all the new and choice kinds as enumerated in Catalogue No. 1.

Geraniums, of 150 varieties, comprising above 60 that are *entirely new, and remarkable for the magnitude of their flowers, and for the brilliant and varied hues which distinguish them*.

Passion Flower, of 30 species and varieties, including the different Scarlet flowering kinds.

Chinese Azeleas, and other varieties, comprising a concentration of the most beautiful kinds.

Amaryllis, of 100 varieties.

Ixia, 30 varieties—Lachenalia of 15 do.—Oxalis of 30 do.—Antholiza of 12 do.

Aloes, of 40 species, and Cactus of 30 do.

Magnolia—The entire collection comprising all the species and varieties known. Plants of the rare Thompsonia and Soulangiana varieties are of blooming size.

Chrysanthemums, above 50 varieties, as enumerated in Catalogue No. 1, and at the low prices therein stated.

Greenhouse Plants will be supplied in Assortments of 25, 50, or 100 or more pots, each a distinct species or variety, at very reasonable rates, and such omitted as the applicant already possesses.

Hardy Herbaceous Flowering Plants will also be supplied in Assortments of 25 to 500 species.

*Omission*.—Common White Lily, or *Lilium candidum*, \$6 per 100.
